To
Whomever It May Concern

October 16, 2026

Dear Sir/Madam,

Application Research Positions in NLP

I am writing to apply for the postdoctoral researcher position at colab Potsdam. I am in the final phase of my PhD in Natural Language Processing at the University of Göttingen, and I would like to bring my research and engineering experience to your team.

Before my doctoral studies, I worked for more than five years as a software engineer and educator, delivering complex web systems end to end. During my PhD I built a solid theoretical and practical foundation in machine learning and Large Language Models (LLMs). I work comfortably with Transformer architectures and computer vision pipelines, and with LLM APIs. In a paper accepted at INLG, I benchmarked the logical reasoning abilities of 12 different models (read the paper).

Retrieval-Augmented Generation. I have built RAG pipelines with LangChain and vector databases; a demonstration project is available on my portfolio website. I also have experience training LLMs with LoRA and reinforcement learning techniques.

LLM integration in production systems. Bridging research and software is one of my main strengths. For example, I integrated an LLM into an enterprise Learning Management System to evaluate student responses in real time and generate personalized learning recommendations (live platform).

I would welcome the opportunity to discuss how my background fits your team's goals, and I thank you for your time and consideration.

Sincerely,

Ramazan Bahrami

Ramazan Bahrami

NLP, AI & Software Developer

Work Experience

10/2022 – Present **Research Assistant / PhD Candidate**, *University of Göttingen*, Göttingen, Germany
- Conduct research in Natural Language Processing, with a focus on reasoning and relation extraction.
- Evaluate and fine-tune language models for domain-specific tasks.
- Publish peer-reviewed findings at international NLP conferences.

Tech stack: Python | PyTorch | Slurm | Git | NumPy | Pandas | Matplotlib | Containers

06/2017 – 08/2021 **Software Developer & Educator**, *Kabul University*, Kabul, Afghanistan
- Developed maintainable code bases, set engineering standards, and wrote system documentation.
- Independently structured Agile development processes and designed system architecture with UML.
- Designed and delivered a Big Data curriculum focused on graph data processing with Neo4j.

Tech stack: Python | UML | Django | JavaScript | Vue.js | HTML | Neo4j

09/2019 – 06/2020 **Adjunct Lecturer**, *American University of Afghanistan*, Kabul, Afghanistan
Taught undergraduate courses in Human-Computer Interaction and core programming.

09/2013 – 06/2015 **Web Application Developer**, *ADRA*, Kabul, Afghanistan
Built end-to-end web applications with CodeIgniter and carried out system testing.

Education

Expected 2026 **PhD, Natural Language Processing**, *University of Göttingen*, Göttingen, Germany

2017 **M.Sc. Computer Science**, *South Asian University*, New Delhi, India

2012 **B.Sc. Physics, Mathematics, Computer Science**, *University of Mysore*, Mysore, India

Selected Projects

2026 **GraphMapping**, *github.com/bahramiramazan/graphmapping*
A novel framework for evaluating multi-hop reasoning in modern LLMs.

Tech stack: LangChain | DeepAgent | Agentic Reasoning

2025 **Sentential Relation Extraction**, *github.com/bahramiramazan/re-representation*
A novel Capsule Network architecture that outperforms current state-of-the-art models in sentence-level relation extraction.

Tech stack: Transformers | Capsule Networks | Python | PyTorch

2017 **SPARQL Query Processing over GraphFrames**
Parallelized SPARQL query processing over large-scale graph datasets using GraphFrames.

Tech stack: Java | Scala | SQL | SPARQL

Publications

2025 **Bahrami, R.** and Yahyapour, R.: "Re-Representation in Sentential Relation Extraction with Sequence Routing Algorithm". *Proc. 8th International Conference on Natural Language and Speech Processing (ICNLSP)*, ACL, pp. 315–327.

2024 **Bahrami, R.** and Yahyapour, R.: "Multihop Question Answering, A Topological Approach for Graph Generation". *6th International Conference on Natural Language Processing (ICNLP)*, pp. 770–774.

2017 **Bahrami, R.**, Gulati, J. and Abulaish, M.: "Efficient processing of SPARQL queries over GraphFrames". *Proc. International Conference on Web Intelligence (WI '17)*, ACM, pp. 678–685.

Community & Leadership

ACM/ICPC Founded and organized the first ACM/ICPC programming contest in Kabul, Afghanistan.

AUAF Core organizer of a workshop series (2019–2021) promoting STEM research among university faculty.

ICTP PWF Co-organized online Machine Learning workshops with *Physics Without Frontiers*, teaching Python, ML fundamentals, and high-energy physics analytics.
